EG Tip: Find Format Error in Code

1. To find any potential format error in your code (non paired parenthesis, missing semi colon, etc), in EG, **press Ctrl+I that is an "i"** which will flag such an error.
2. You can then use arrow key or Ctrl+[(left bracket) and the formatter will proceed to the next unpaired or missing object in the code that caused a flag.

```
proc sql noprint;
   connect to teradata as tera2
   (user=&user pw=&password server=&server
   mode=teradata FASTEXPORT=YES);
   create table buyers as
     select * from connection to tera2
      (select id,
         trxn_dt,
         sum (ln_itm_qty) as Items,
         sum (ext_prc_amt as Sales
         from store.linetrxn a
           join cust.indv_xref b
           on a.rid = b.rid
```

Formatting Error

Please check for an unmatched parenthesis on line 7.
