

SAS In-Database Processing does not work with LDAP

SAS Base procedures in an environment using LDAP, will result in error when using in-database processing An error may be something like:

ERROR: General error The UserId, Password or Account is invalid.

Cause: Use of LDAP requires an "@" sign in user name which is not compatible/usable during in-database processing when the string containing the "@" sign is passed from the engine to the driver.

Fix: It is suggested that LDAP is not used for in-database processing with procedures.
