

Using Java 7 with JBoss (Community-Free)

Using Java 7 version with JBoss free ware versions will need manual steps. Those steps have not yet announced by SAS. It is recommended that for SAS 9.3 TS1M2 installs, remain with the JDK 6_24 versions and at install time opt in for JRE SAS embeds in its Depot. Do note that for 64 bit systems 64 bit JDK will be needed, 32 bit JRE is needed for both 64 & 32 bit. Do consult the third party page before installing SAS to understand the nuances and requirements for your install. Also, SAS links take you to the Java site (Oracle) however, Oracle has archived all pre 7 versions. To find version 6 archives, use this link: <http://linkd.in/18g0w0W>
