

## Tuning Recommendations for SAS Visual Analytics Transport Service-SAS Midtier Tuning Series V

The following options are available to tune SAS Visual Analytics Transport Service since SAS Visual Analytics 7.3. To tune, perform the following steps:

1. Log on to SAS Management Console.
2. On the Plug-ins tab, select **Application Management** → **Configuration Manager** → **SAS Application Infrastructure** → **Visual Analytics version** → **Visual Analytics Services version**.
3. **Right-click** Visual Analytics Transport Service version and **select** Properties.
4. **Click** the Advanced tab and **specify** one or both of the following properties and values:

### *SAS Visual Analytics Transport Service Property Descriptions*

Property Name	Default Value	Recommended Value	Description
vat.subscribe.concurrentRequestLimit.guest	5	10	Adjust this property on systems with heavy guest account access from SAS Mobile BI. This property controls the number of report subscribe requests that can be executed in parallel for the guest user.
vat.xmlParserPoolSize	0	200	Use this property to enable pooling of XML parsers for reuse. Parser pooling can be helpful in optimizing performance for report viewers in high-volume systems. This property identifies the number of parser instances to be initialized in the parser pool at start-up. A value of zero indicates that parser pooling is disabled.

1. Click **OK** to close the Visual Analytics Transport Service Version Properties window.
