

## An issue has been encountered with your SAS Software Depot that cannot be corrected.

Background: This specific error is occurred during SAS binaries installation & configuration.

Error message:

An issue has been encountered with your SAS Software Depot that cannot be corrected. A summary of the error is shown below. Full details can be found in the log at `/usr/local/sas/SASHome/InstallMisc/InstallLogs/IT_2022-08-09-09.05.22.log` Install file: `/tmp/_setup17399/hotfixes/extracted/product_data/hyperagnt_J9U008_prt_xx_sp0_1/install.xml` does not exist

### Resolution:

The following are the resolution steps:

- 1) For possible or quick fix, please check `/tmp` directory disk space. In our case `/tmp` directory space is full.

```
/dev/mapper/rootvg-tmp 2.0G 20M 1.9G 1% /tmp
```

2) Close all SAS Deployment Wizard windows sessions

3) Run the following command to open a new SAS Deployment Wizard session

```
./setup.sh -record -deploy -templocation /saswrk
```

**Note:** We specified /saswrk mount point as a temp location for the SAS installation & configuration. All temporary files will be resided their until deployment is finished.
