

(Jan 2023) -SAS Admin – SASUSER location Change in Windows Operating Environment

SAS 9.4 installations on Windows environment uses the FOLDERID_DOCUMENTS variable for the SASUSER default location instead of CSIDL_PERSONAL Windows special folder variable.

You may run the following code

```
PROC OPTIONS OPTION=SASUSER VALUE;  
  
RUN;
```

To get the value of your SASUSER location in a SAS session (SAS Enterprise Guide, SAS Studio, and or SAS BASE Editor). SASUSER configuration option is defined in sasv9.cfg in the SASHOME\SASFoundation\9.4\<en/u8/d1>/sasv9.cfg file.

The SASUSER value (shown below in a sasv9.cfg)

```
-SASUSER "?FOLDERID_Documents\My SAS Files\9.4"
```

Could resolve to **c:\users\user-ID\documents\My SAS Files\9.4**, or

\OneDrive\documents\My SAS Files\9.4

depending on your current default location set on your machine.

SASUSER location could be used to save your SAS artifacts. A full disk where SASUSER reside may prevent from SAS jobs to execute.
