How to Display SAS Viya 4.x Cadence

SAS Viya is updated frequently. You can choose either monthly updates (Stable cadence) or biannual updates (Long-Term Support cadence).

The kubectl command line tool can be used to find out cadence version at your organization. The following command will display the display name, version, name, and release number. The display name and name shows the cadence type.

The command to display cadence level of Viya 4.0 in your organization is

```
kubectl-n name-of-namespace get cm -o yaml | grep "SAS_CADENCE"
```

Output:

```
SAS_CADENCE_DISPLAY_NAME: LTS 2021.1  
SAS_CADENCE_DISPLAY_SHORT_NAME: LTS  
SAS_CADENCE_DISPLAY_VERSION: "2021.1"  
SAS_CADENCE_NAME: lts  
SAS_CADENCE_RELEASE: "20211118.1605714731983"  
SAS_CADENCE_VERSION: "2021.1"
```

In this example, LTS denotes this as a long-term support cadence.
